HANDBOOK OF INFORMATICS FOR NURSES & HEALTH CARE PROFESSIONALS (3RD EDITION) BY TONI LEE HEBDA, PATRICIA CZAR, CYNTHIA M. MASCARA PDF

However, some people will seek for the very best seller publication to read as the very first reference. This is why; this Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara exists to fulfil your necessity. Some people like reading this book Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara because of this prominent book, yet some love this because of favourite author. Or, several also like reading this book Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara since they really have to read this book. It can be the one that actually enjoy reading.

From the Inside Flap
Preface

The original idea for this book came from the realization that there were few comprehensive sources available with practical information about computer applications and information systems in health care. From its inception this book was envisioned as a guide for nurses and other health care professionals who needed to learn how to adapt and use computer applications in the workplace. As the outline developed it became apparent that this book could also serve as an informatics text for students in the health care professions. This second edition contains updates and revisions to reflect changes that have occurred in the rapidly evolving technology and health care field since the book was first written.

Each of the authors has a long-standing interest and involvement in nursing informatics. In fact, the same idea that inspired this book also led a group of nurses that included the authors to form the Tri-State Nursing Computer Network user group in 1988. This organization remains active, and has recently changed its name to Tri-State Healthcare Informatics Professionals, with an expanded focus to include other informatics professionals in addition to nurses.

This book is divided into three sections. The first section, General Computer Information, reviews information common to all information systems. It assumes no prior knowledge of or experience with computers. Chapter 1 introduces the reader to the role of informatics in contemporary health care. Chapter 2 reviews basic information and terminology related to computer hardware and software. The section on the roles of various support personnel has been expanded. Chapter 3 emphasizes the importance of maintaining data integrity and suggests some practical steps to ensure current, accurate data in health care information systems. The fourth chapter addresses basic Internet use to support health care. The discussion on search tools and intranets has been expanded and content has been added on portals, e-health, and e-care. Additional information on Internet use and resources are found in the appendices at the end of the book.

The second section, Health Care Information Systems, covers information and issues related to the use of computers and information systems in health care. This section bridges the gap between the theory and practice of nursing informatics. Chapter 5 covers basic information on health care information systems, including decision support and expert systems. Chapters 6 through 15 discuss all aspects of selecting, implementing, and operating these systems. Chapters 6 through 9 discuss the processes of overall and system strategic planning, system selection, implementation, and training. Chapter 8 now contains additional information on testing, system evaluation, and strategies to implement system changes after system installation. Other pertinent topics are addressed in the remaining chapters. Chapter 10 discusses information security and confidentiality; Chapter 11, system integration; and Chapter 12, the computerized patient record. Chapter 13, Regulatory and Accreditation Issues, has been updated to include a review of the Health Insurance Portability and Accountability Act (HIPAA) and its implications for nursing informatics and health care professionals. Chapter 14 covers community health information networks and Chapter 15 covers disaster planning and recovery.

Section III covers three specialty applications of computers in health care. Chapter 16 discusses ways that computers can support health care education. It now contains content on Web-based education. The title of Chapter 17 has been changed since the first edition from Telemedicine to Telehealth to reflect the growing acceptance of telehealth as a broader term. This chapter explores the growing field of telehealth, which uses computer and teleconferencing technology to provide top-quality health care to clients all over the world. Chapter 18 looks at ways that computers are increasingly being used in nursing and other health care research.

Four appendices are included at the end of the book. The first three provide detailed information on getting up and running on the Internet, using the Internet to perform a job search, and Internet resources of special interest to health care professionals. The fourth appendix provides suggested answers to the case studies that are found at the end of every chapter.

Each chapter contains pedagogical aids that help the readers learn and apply the information discussed. Learning objectives let the readers know what they can expect to learn from the chapter. Case studies at the end of each chapter discuss common, real-life applications, which review and reinforce the concepts presented in the chapter. Each chapter also includes a summary and list of references. The Glossary at the back of the book serves to familiarize readers with the vocabulary used in this book and in health care informatics.

We recognize that health care professionals have varying degrees of computer and informatics knowledge. One of the features of this book is that it does not assume that the reader has prior knowledge of computers. All computer terms are defined in the text and in the Glossary. This book may be used the following different ways:

It may be read from cover to cover for a comprehensive view of nursing informatics. Specific chapters may be read according to reader interest or need. It may serve as a reference for nurses and other clinicians involved in system design, selection, and implementation. It may be useful for the educator or researcher who wants to make better use of information technology. It can serve as a review for the American Nurses Association's Informatics Credentialing examination.

Cynthia Mascara

From the Back Cover

Handbook of Informatics for Nurses & Health Care Professionals is an introduction to the computer technology used by nurses & other health care professionals. Offering an overview of informatics, as well as practical information for day-to day use, this book includes:

- Expanded coverage of mobile computing and PDAs.
- Web-based technology, search tools, and evaluation criteria for online material.
- Various forms of electronic communication and ways to use it more effectively.
- The role of strategic planning in information management and system design and implementation.
- The development and use of the Electronic Medical Record (EMR).
- Regulatory and accreditation requirements, such as HIPAA.
- Disaster planning and recovery chapter with specific measures for the protection and back-up of information.
- A definition of telehealth as well as some of its applications and related issues.
- Applications of computer-based education for professionals and consumers.

About the Author

Toni Hebda, RN, PhD, is a nurse clinician at the University of Pittsburgh Medical Center. She has worked as a system analyst and adjunct faculty for Duquesne University School of Nursing, having taught both nursing informatics and clinical courses. Her interest in informatics provided a focus for her dissertation and subsequently led her to help establish a regional nursing informatics support group and obtain a graduate degree in information science and ANCC certification as informatics nurse. She is a reviewer for the Online Journal of Nursing Informatics.

Patricia Czar, RN, is an Information Systems Consultant. She has been active in informatics for more than 25 years, serving as manager of clinical systems at a major medical center where she was responsible for planning, design, implementation, and ongoing support for all of the clinical information systems. She has been an active member of several informatics groups and has presented nationally and internationally. Ms. Czar has served as mentor for nursing and health informatics students and has a Microcomputer Specialist certificate.

Cynthia Mascara, RN, MSN, MBA, is a Principal Consultant with Siemens Medical Solutions-Health Services. She provides consulting related to clinical systems implementation in the United States and internationally. Ms. Mascara has extensive experience with project management as well as the design and implementation of clinical information systems. She previously served as a nursing informatics specialist at a major medical center and has been an active member and leader in several informatics groups. Ms. Mascara has also presented extensively. She previously served in nursing services and administration at the University of Pittsburgh Medical Center.

Pointer in selecting the very best book **Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara** to read this day can be gotten by reading this page. You can locate the very best book Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara that is marketed in this globe. Not only had the books published from this country, but additionally the other countries. And now, we intend you to read Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara as one of the reading materials. This is just one of the best publications to accumulate in this site. Look at the resource and also look the books Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara You could locate great deals of titles of guides given.

There is no question that book *Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara* will certainly consistently provide you inspirations. Even this is merely a book Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara; you can locate several styles as well as kinds of books. From delighting to journey to politic, and also scientific researches are all given. As just what we explain, below our company offer those all, from famous authors as well as author in the world. This Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara is one of the collections. Are you interested? Take it currently. Just how is the way? Read more this short article!

When someone must go to the book shops, search shop by store, rack by shelf, it is really frustrating. This is why we offer guide compilations in this internet site. It will relieve you to search the book Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara as you like. By looking the title, author, or writers of the book you want, you can locate them quickly. In the house, workplace, or perhaps in your means can be all finest area within net connections. If you intend to download and install the Handbook Of Informatics For Nurses & Health Care Professionals (3rd Edition) By Toni Lee Hebda, Patricia Czar, Cynthia M. Mascara, it is very simple after that, since currently we proffer the connect to acquire and also make bargains to download [Handbook Of Informatics For Nurses & Health Care Professionals \(3rd Edition\) By Toni Lee Hebda, Patricia Czar, Cynthia M. Handbook of Informatics for Nurses and other Healthcare Prof

By Lisa Parrinella

I am currently studying Nursing Informatics in a Master's Certification Course. I loved this book! It was user friendly and covered a variety of topics. It was very easy to read and understand. Since this is a new specialty in Nursing, most of us are starting at ground zero. This is a great place to start!
